

Effect of Larger Pore Size On HILIC Separations of Neutral and Acidic Glycans

Increased Resolution of Complex Glycans With 200Å Pore HILIC Media

Sample: 2AB labeled N-Glycans
Column: ZIC-HILIC, 4.6 x 150mm
Gradient: 80% to 65% ACN, 50mM ammonium acetate, pH 7

Volatile HILIC Conditions Increases MS Detection
eHILIC of Derivatized Sialylated Complex Glycans
